Sudden Unexplained Death in Childhood (SUDC) is a category of death for a child 12 months of age or older that remains unexplained after a thorough case investigation, including the performance of a complete autopsy, examination of the death scene, and clinical history review. Most often, a seemingly healthy child goes to sleep and never wakes up. At this time, we do not know what causes SUDC, how to predict it, or how to prevent it. A medical examiner or coroner could rule a child's death SUDC when they complete a thorough evaluation and find no other cause of death.
